Nothing Found

Your search for **+wyv +four +primary** did not return any results.

You may want to try an Advanced Search for additional options.

Please review the Quick Tips below or for more information see the Search Tips.

Quick Tips

- Enter your search terms in lower case with a space between the terms.

  ```
  sales offices
  ```

  You can also enter a full question or concept in plain language.

  ```
  Where are the sales offices?
  ```

- Capitalize proper nouns to search for specific people, places, or products.

  ```
  John Colter, Netscape Navigator
  ```

- Enclose a phrase in double quotes to search for that exact phrase.

  ```
  "museum of natural history" "museum of modern art"
  ```

- Narrow your searches by using a + if a search term must appear on a page.

  ```
  museum +art
  ```

- Exclude pages by using a - if a search term must not appear on a page.

  ```
  museum -Paris
  ```

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.

```
museum +"natural history" dinosaur -Chicago
```

1 Take a walk and cluster genes: a TSP-based approach to optimal rearrangement clustering

Sharlee Climer, Weixiong Zhang

July 2004 **Twenty-first international conference on Machine learning**

Full text available: pdf(328.04 KB) Additional Information: full citation, abstract, references

Cluster analysis is a fundamental problem and technique in many areas related to machine learning. In this paper, we consider rearrangement clustering, which is the problem of finding sets of objects that share common or similar features by arranging the rows (objects) of a matrix (specifying object features) in such a way that adjacent objects are similar to each other (based on a similarity measure of the features) so as to maximize the overall similarity. Based on formulating this problem as ...

2 Building functional patterns for implementing distributed applications

Victor M. Gulias, Alberto Valderruten, Carlos Abalde

October 2003 **Proceedings of the 2003 IFIP/ACM Latin America conference on Towards a Latin American agenda for network research**

Full text available: pdf(311.45 KB) Additional Information: full citation, abstract, references

Combining the use of design patterns and distributed functional programming is pointed out as a key factor to produce correct distributed systems running on a cluster of computers. A high degree of adaptability, fault tolerance and scalability are obtained at low development costs. Patterns of recurrent distributed design problems are presented and implemented using the distributed functional language Erlang. The design patterns discussed involve coordination mechanisms of concurrent threads ...

3 Actual truth, possible knowledge

Wlodek Rabinowicz, Krister Segerberg

March 1994 **Proceedings of the 5th conference on Theoretical aspects of reasoning about knowledge**

Full text available: pdf(1.02 MB) Additional Information: full citation, abstract, references

F.B. Fitch is credited with a simple argument purporting to show that the verificationist claim: (Ver) Truth implies Knowability, leads to the unacceptable conclusion: Truth implies Knowledge.

4 Minimal kernel classifiers

Glenn M. Fung, Olvi L. Mangasarian, Alexander J. Smola

March 2003 **The Journal of Machine Learning Research**, Volume 3

Full text available: pdf(521.15 KB) Additional Information: full citation, abstract, references, index terms

A finite concave minimization algorithm is proposed for constructing kernel classifiers that use a minimal number of data points both in generating and characterizing a classifier. The algorithm is theoretically justified on the basis of linear programming perturbation theory and a leave-one-out error bound as well as effective computational results on seven real world datasets. A nonlinear rectangular kernel is generated by systematically utilizing as few of the data as possible both in trainin ...

5 Leakage power modeling and reduction with data retention

Weiping Liao, Joseph M. Basile, Lei He

November 2002 **Proceedings of the 2002 IEEE/ACM international conference on Computer-aided design**

Full text available: pdf(202.36 KB) Additional Information: full citation, abstract, references, citings, index terms

In this paper, we study leakage power reduction using power gating in the forms of the Virtual power/ground Rails Clamp (*VRC*) and Multi-threshold CMOS (*MTCMOS*) techniques. We apply power gating to two circuit types: memory-based units and datapath components. Using a microarchitecture-level power simulator, as well as power and timing models derived from detailed circuit designs, we further study leakage power modeling and reduction at the system level for modern high-performance V ...

6 Research session 8: semistructured data and XML: Labeling dynamic XML trees

Edith Cohen, Haim Kaplan, Tova Milo

June 2002 **Proceedings of the twenty-first ACM SIGMOD-SIGACT-SIGART symposium on Principles of database systems**

Full text available: pdf(266.89 KB) Additional Information: full citation, abstract, references, citings, index terms

We present algorithms to label the nodes of an XML tree which is subject to insertions and deletions of nodes. The labeling is done such that (1) we label each node immediately when it is inserted and this label remains unchanged, and (2) from a pair of labels alone, we can decide whether one node is an ancestor of the other. This problem arises in the context of XML databases that support queries on the structure of the documents as well us on the changes made to the documents over time. We pro ...

7 Semantic Web Services: XL: an XML programming language for web service specification and composition

Daniela Florescu, Andreas Grünhagen, Donald Kossmann

May 2002 **Proceedings of the eleventh international conference on World Wide Web**

Full text available: pdf(236.18 KB) Additional Information: full citation, abstract, references, citings, index terms

We present an XML programming language specially designed for the implementation of Web services. XL is portable and fully compliant with W3C standards such as XQuery, XML Protocol, and XML Schema. One of the key features of XL is that it allows programmers to concentrate on the logic of their application. XL provides high-level and declarative constructs for actions which are typically carried out in the implementation of a Web service; e.g., logging, error handling, retry of actions, workload ...

8 Oracle-based checking of untrusted software

George C. Necula, S. P. Rahul

January 2001 **ACM SIGPLAN Notices , Proceedings of the 28th ACM SIGPLAN-SIGACT symposium on Principles of programming languages**, Volume 36 Issue 3

Full text available: pdf(823.41 KB) Additional Information: full citation, abstract, references, citings, index terms

We present a variant of Proof-Carrying Code (PCC) in which the trusted inference rules are represented as a higherorder logic program, the proof checker is replaced by a

nondeterministic higher-order logic interpreter and the proof by an oracle implemented as a stream of bits that resolve the nondeterministic interpretation choices. In this setting, Proof-Carrying Code allows the receiver of the code the luxury of using nondeterminism in constructing a simple yet powerful checking procedure.This ...
